

S-time-distance presentation at Eurostat

Sunday, 02 May 2010

S-time-distance

method "A Novel Generic Statistical Measure Providing New Insights from Existing Data" Attached is the presentation of P. Sicherl at the Eurostat, March 2010 and at the Statistical Office of the Republic of Slovenia, April 2010

S-time-distance is a novel

statistical measure providing new insights to many problems. Expressed in time units it is readily understood by policy makers, managers, media and general public, thus an excellent presentation and communication tool for policy analysis and debate.

Professor Sicherl first provides an outline on the time distance methodology. There is a number of examples of application topics provided based on Eurostat and some other international data.

A special attention is given to using the time distance method for graphical presentation of relevant statistical indicators. Presentation:

- Sicherl Eurostat March 16 2010 and SURS April 20 2010.ppt
